PLAN:

- What is the GOAL of the test
- Who will serve as experimenters for the test (roles)?
- Who are the users going to be and how are we going to get hold of them?
- How many users are needed?
- What test tasks will the users be asked to perform?
- What criteria will be used to determine when the users have finished each of the test tasks correctly?
- What user aids will be made available to the test users (guidelines, online help, etc)?
- To what extent will the experimenter be allowed to help the users during the test?
- What data is going to be collected and how will it be analysed?

Plan:

1. The goal is to ask and have people test our website and give creative and nurturing feedback for the intuitiveness and coloring of the website. The testing will give us valuable data that will help us to tweak the web page better for the users.

MB: Yes, but feedback on what? The functions?, recognition of your symbols?, navigation, how the colours are taken, usefulness? Or what?

2. We're going to ask the students in the area of Leppävaara, especially those who are studying in the same school as we are since our website is closely linked to this area of expertise.
3. Users who are going to be using our website are the IT-students and those who work on the same field. The way to get hold of them would work through the grapevine at first, but later on there might be adds.
4. For testing, 5 users are plenty. The first 3 are going to give most of the opinions and after that the feedback we're going to get will start to repeat itself. The 2 after that are going to verify us that we got the popular opinions, and there isn't really anything to add.

MB: Hihaa you remembered the google guy?

5. The user will be testing the usability of the website and answering questions of the UI. What we will want to hear is the ease-of-usage of the website and what needs to be better, simpler or in different position.

6. The test will be navigating through the website and commenting on a post and adding a post themselves successfully.

MB: Means that you ask the user to:

1. Browse images, rate what S/he likes...
2. Upload an image..
3. Leave a comment to it
4. Change setting ...

Or what are your tasks?

7. Since the web site is as simple as can be, we don't think that there needs to be any guidelines or online help, but during the test the users can ask for help if necessary. But if seen that the users will need a guideline or FAQ page, then it will be added, though the ideal situation is that none of that will be needed.
8. As little as possible naturally, meaning that the experimenter will ask the user to do the test mentioned previously and if the user asks for help, then the help will be provided.
9. User comments of the website will be documented and analyzed by us as a group where we will determine from the comments whether or not the website will need changing and tweaking.
